

T-BEAM* FACT SHEET

Whether used to add a more gutsy look to an open T-bar grid, or to relieve the monotony of a flat acoustical ceiling, T-Beam offers an easy and economical way of adding three-dimensional interest to an existing suspended ceiling.

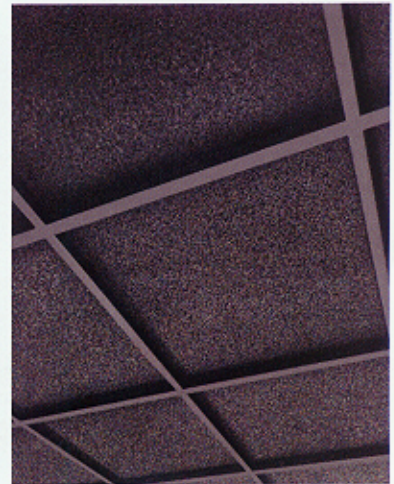

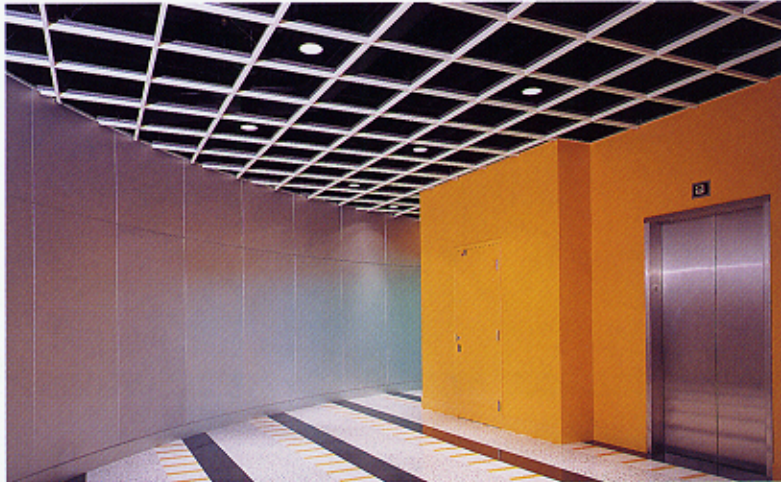

T-Beam is compatible with any T-bar grid having a standard 15/16" wide exposed flange. Standard finishes are White, Black, Red and Aluminum Gray. It can also be factory painted in any color selected by the designer. To install, T-Beam simply snaps to the bottom flange of the existing T-bar grid.

No changes are generally required to lighting fixtures, air diffusers, sprinklers, or other ceiling utilities.

Try T-Beam on your next new or remodel project. You'll be delighted by the difference it can make.
